

	<b>Year</b>	6	<b>Topic</b>	Evolution and inheritance
	<ul style="list-style-type: none"> <li>Recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago.</li> <li>Recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents.</li> <li>Identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution.</li> </ul>			

Prior learning	Future learning
<ul style="list-style-type: none"> <li>Identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other. (Y2 - Living things and their habitats)</li> <li>Describe in simple terms how fossils are formed when things that have lived are trapped within rock. (Y3 - Rocks)</li> <li>Recognise that environments can change and that this can sometimes pose dangers to living things. (Y4 - Living things and their habitats)</li> </ul>	<ul style="list-style-type: none"> <li>Heredity as the process by which genetic information is transmitted from one generation to the next. (KS3)</li> <li>A simple model of chromosomes, genes and DNA in heredity, including the part played by Watson, Crick, Wilkins and Franklin in the development of the DNA model. (KS3)</li> <li>The variation between species and between individuals of the same species means some organisms compete more successfully, which can drive natural selection. (KS3)</li> <li>Changes in the environment may leave individuals within a species, and some entire species, less well adapted to compete successfully and reproduce, which in turn may lead to extinction. (KS3)</li> </ul>

WHAT PUPILS NEED TO KNOW OR DO TO BE SECURE	
Show understanding of a concept using scientific vocabulary correctly	
Key learning	Possible evidence
<p>All living things have offspring of the same kind, as features in the offspring are inherited from the parents. Due to sexual reproduction, the offspring are not identical to their parents and vary from each other.</p> <p>Plants and animals have characteristics that make them suited (adapted) to their environment. If the environment changes rapidly, some variations of a species may not suit the new environment and will die. If the environment changes slowly, animals and plants with variations that are best suited survive in greater numbers to reproduce and pass their characteristics on to their young. Over time, these inherited characteristics become more dominant within the population. Over a very long period of time, these characteristics may be so different to how they were originally that a new species is created. This is evolution.</p>	<ul style="list-style-type: none"> <li>Can explain the process of evolution</li> <li>Can give examples of how plants and animals are suited to an environment</li> <li>Can give examples of how an animal or plant has evolved over time e.g. penguin, peppered moth</li> <li>Give examples of living things that lived millions of years ago and the fossil evidence we have to support this</li> </ul>

Fossils give us evidence of what lived on the Earth millions of year ago and provide evidence to support the theory of evolution. More recently, scientists such as Darwin and Wallace observed how living things adapt to different environments to become distinct varieties with their own characteristics.	<ul style="list-style-type: none"> <li>Can give examples of fossil evidence that can be used to support the theory of evolution</li> </ul>
<b>Key vocabulary</b>	
Offspring, sexual reproduction, vary, characteristics, suited, adapted, environment, inherited, species, fossils	

**Common misconceptions**

- Some children may think:
- adaptation occurs during an animal's lifetime: giraffes' necks stretch during their lifetime to reach higher leaves and animals living in cold environments grow thick fur during their life
  - offspring most resemble their parents of the same sex, so that sons look like fathers
  - all characteristics, including those that are due to actions during the parent's life such as dyed hair or footballing skills, can be inherited
  - cavemen and dinosaurs were alive at the same time.

**Apply knowledge in familiar related contexts, including a range of enquiries**

Activities	Possible evidence
<ul style="list-style-type: none"> <li>Design a new plant or animal to live in a particular habitat.</li> <li>Use models to demonstrate evolution e.g. 'Darwin's finches' bird beak activity.</li> <li>Use secondary sources to find out about how the population of peppered moths changed during the industrial revolution.</li> <li>Make observations of fossils to identify living things that lived on Earth millions of years ago.</li> <li>Identify features in animals and plants that are passed on to offspring and explore this process by considering the artificial breeding of animals or plants e.g. dogs.</li> <li>Compare the ideas of Charles Darwin and Alfred Wallace on evolution.</li> <li>Research the work of Mary Anning and how this provided evidence of evolution.</li> </ul>	<ul style="list-style-type: none"> <li>Can identify characteristics that will make a plant or animal suited or not suited to a particular habitat</li> <li>Can link the patterns seen in the model to real examples</li> <li>Can explain why the dominant colour of the peppered moth changed over a very short period of time</li> </ul>

**Working scientifically**

**Year 6: Evolution and Inheritance**

Classifying: The children decide how to record and present evidence. They record observations e.g. using annotated photographs, videos, labelled diagrams, observational drawings, labelled scientific diagrams or writing. They record measurements e.g. using tables, tally charts, bar charts, line graphs and scatter graphs. They record classifications e.g. using tables, Venn diagrams, Carroll diagrams and classification keys.  
Children present the same data in different ways in order to help with answering the question.

- To show variation in a species:
  - Classify a species of animal e.g. cats, dogs
  - classify a species of plant e.g. daffodils, tulips, lilies.

**Observing over time**

- Not relevant

### Pattern seeking

- Use different pieces of equipment, e.g. chopsticks, toothpicks, cutlery, to look for patterns linking the suitability of bird beaks for the available food e.g. rice, grapes, raisins.

### Comparative/Fair testing

- Not relevant

Researching: Children independently ask scientific questions. This may be stimulated by a scientific experience or involve asking further questions based on their developed understanding following an enquiry.

- Given a wide range of resources the children decide for themselves how to gather evidence to answer a scientific question. They choose a type of enquiry to carry out and justify their choice. They recognise how secondary sources can be used to answer questions that cannot be answered through practical work.
- The children select from a range of practical resources to gather evidence to answer their questions. They carry out fair tests, recognising and controlling variables. They decide what observations or measurements to make over time and for how long. They look for patterns and relationships using a suitable sample.
- Research different types of a species and their characteristics making them suitable for different habitats e.g. penguins.
